

Ubuntu Unity

at ubuCon Asia 2021

We are

an Ubuntu remix (unofficial
Ubuntu flavour) that uses
Unity7 instead of gnome-shell.

**and a free and
open source project.**

Unity7

Along with the Unity7 Maintainers team, we have got Unity7 to compile on newer versions of Ubuntu and are maintaining it.

UnityX

UnityX is the desktop successor of Unity7, which we are working on. It is written in Fish and python3.
