Canonical is a global company that has been developing operating systems since 2004

# Join US

## Truly distributed

---

Exceptional, self-motivated, organised and passionate people deserve the freedom to live where they want. Our teams travel regularly to meet colleagues and customers.

*“I have seen incredible places – an unexpected benefit of life at Canonical”*

## Best in class

---

We rate top for Linux security. We run more hosts, more workloads and more devices than anybody else, because we strive to do everything insightfully, properly, fairly, and openly.

*“These are exciting challenges and we measure ourselves against the world leaders. It’s tough, but satisfying”*

## Enterprise focused

---

The world is moving to Ubuntu – open source that’s faster, cheaper and better. Empower engineers, secure precious data, share knowledge and lead the change.

*“My customers are transforming their operations around cloud, and I get to show them that future”*

# Certified Ubuntu Engineer

Stand out! Become a CUBE-Certified Ubuntu Engineer.

With millions of Ubuntu users all around the globe, the only way to demonstrate your Ubuntu expertise is by earning Ubuntu badges.

[Apply for free access now >](#)

## Why become a Certified Ubuntu Engineer?

Ubuntu is the world's most popular open source OS for both development and deployment, from the data centre to the cloud to the Internet of Things. So whether you are a fresher trying to pave your way into the tech field, or an experienced professional looking to upgrade your career, Ubuntu certification is for you! This program will help you upgrade your career and become the Ubuntu go-to person within your organisation, or even demonstrate your expertise to get hired by employers who are more likely than not using Ubuntu software.

## About CUBE

Canonical has crafted the CUBE certification program in a way that allows you to earn badges in 15 different tracks at your own pace - we call them microcerts. After achieving all 15 microcerts, you earn the CUBE badge, certifying your proficiency and expertise in Ubuntu, by Ubuntu. We have also created free-to-use study material and documentations to help prepare you for the exams.

Architecture	Packages	Commands
Devices & Files	Bash	Admin
Services	Networking	Security
Kernel	Storage	Virtualisation
MicroK8s	MAAS	Juju
